

Automatic sample dilution station

SamplePrep

The sample dilution station **SamplePrep** consists of an autosampler combined with a dilutor and is controlled by the **EasyPrep** software. It can be used for automatic sample (pre-)dilution and standard preparation in the daily routine. The flexible **EasyPrep** software offers the following routines:

- automatic (pre-)dilution of sample series and single samples
- preparation of single and mixed standard solutions from stock solutions
- spiking of samples.

A multi-stage dilution is also possible.

The sample lists can be saved as pdf-files or printed out.

The utilized autosampler can be used together with the FIA system of **MLE**, too.
